TITLE	Kids Count Data Book. State Profiles of Child Well-Being.
INSTITUTION	Center for the Study of Social Policy, Washington, DC.
SPONS AGENCY	Annie E. Casey Foundation, Greenwich, CT.
PUB DATE	91
NOTE	176p.; For the 1990 report, see ED 320 167.
PUB TYPE	Statistical Data (110)
EDRS PRICE	MF01/PC08 Plus Postage.
DESCRIPTORS	Adolescents; Birth Weight; *Child Health; Children; High School Graduates; High Schools; Infant Mortality; *National Surveys; Poverty; Pregnant Students; Prisoners; Racial Differences; State Surveys; *Trend Analysis; Unwed Mothers; Violence; *Well Being; *Youth Problems

ABSTRACT

Statistics are presented for eight measures of child and adolescent health, education, and social and economic well-being in each of the 50 states and the District of Columbia. Indicators measured were: (1) percent low birth weight babies; (2) infant mortality rate (per 1,000 live births); (3) child death rate ages 1-14 (per 100,000 children); (4) teen violent death rate ages 15-19 (per 100,000 teens); (5) percent teen out-of-wedlock births; (6) juvenile incarcaration rate (per 100,000 juveniles); (7) percent of children in poverty; and (8) percent graduating from high school. Data are included on the following perspectives: United States profile; United States minority profile; state profiles; national goals and performance for children; two-year "Kids Count" profile; states in rank order by indicators; and state facts. Overview and Findings

Kids count. Through the nation's children, we can see and touch the 21st century. The first high school graduating class of the new century is in the second grade today. The skills and values that children will bring to their communities and to their jobs tomorrow are being shaped today. The 1991 *KIDS COUNT Data Book* provides facts on the status of America's children. In these numbers and charts is a striking and sometimes alarming portrait of how our children are doing.

Many children are growing up healthy, resilient, and skilled, but too many are not. Violence and poverty, poor health, teen parenthood and school failure dim the future of millions of children. And when their future is dimmed, the lives of all Americans are diminished.

Children cannot vote; they do not sit in city council chambers, corporate board rooms or newspaper editorial meetings. KIDS COUNT gives children a voice, a voice that speaks through numbers and statistics, through trends and through the conclusions that can be drawn when we are more aware of how children are faring.

In the pages that follow, the reader can see how well, or how poorly, the country or a state is doing across a range of eight different measures of child and adolescent health, education, social and economic well-being. These measures are generally comparable across states, and are widely regarded as significant and reliable indicators.

What Do the Data Tell Us?

The KIDS COUNT data show that our nation's children are at greater risk today than at the beginning of the 1980s. Child poverty increased and persists. Births to unmarried teens rose. The chances that a teenager would die a violent death by accident, suicide or murder also increased over the decade. On other key measures of child well-being, our national progress has stalled.

There are significant differences in outcomes and trends among children depending on their race and ethnic background. For example, black and Hispanic children are much more likely than white children to be poor, unmarried teen mothers, or high school dropouts. However, white children experienced greater erosion in their status in these three areas than either black or Hispanic children during the 1980s.

"Our children are a mirror, an honest reflection of their parents and their world. Sometimes the reflection is flattering and at other times we simply don't like what we see. But we must never turn away." President George Bush, World Summit for Children, United Nations, September 30, 1990.

There are also differences in the status of children among the states, reflecting the diverse economic, social, demographic, political and historical conditions in each state.

Child Poverty

During the 1980s child poverty increased and remains at stubbornly high levels. By the end of the 1980s, over 12 million children, or 20.1 percent of all American children, were growing up in poverty. Black children were worst off: 43.8 percent of black children were living in poverty. Hispanic children were only slightly better off, with 38.2 percent in poverty. Among white children, 15.4 percent were impoverished.

There were differences in the rate at which children became poor over the 1980s: for black children, there was a 16 percent increase; for Hispanic, a 31 percent increase; and for white children, a 36 percent increase.

The increase in child poverty was widespread: forty-one states and the District of Columbia saw an increase during the 1980s. Children in the southern states were more likely to be poor than in other regions of the country. But, there were jumps of 50 percent or more in child poverty in Colorado, Iowa, Michigan, Minnesota, Montana, Nebraska, Nevada, West Virginia and Wyoming.

The increases covered great geographic swaths: for instance, the states of Colorado (53 percent), Nevada (54 percent), Montana (61 percent), and Wyoming (100 percent); or a mid-western belt with Ohio (45 percent), Indiana (45 percent), Illinois (46 percent), Michigan (53 percent), Iowa (55 percent) and Minnesota (78 percent).

Births to Unmarried Teens

Births to unmarried teens rose in the 1980s. In 1980, 271,801 babies were born to unwed teens representing 7.5 percent of all births. By 1988, that number had risen to 322,406 births to unwed teens, or 8.2 percent of all births. Forty states saw an increase in the percent of out-of-wedlock teen births between 1980 and 1988.

Over the 1980s, the percent of black teen out-of-wedlock births declined by 8 percent, while it rose significantly for white (25 percent) and Hispanic (20 percent) teens. However, the percent of black out-of-wedlock teen births is almost four times as high as the percent for white teenagers.

The ten jurisdictions with the highest percent of births to unmarried teens were primarily southern states: District of Columbia (16.7 percent); Mississippi (14.9 percent); Louisiana (11.9 percent); South Carolina (11.6 percent); New Mexico (10.8 percent); Alabama, Arkansas and Georgia (10.6 percent); North Carolina (10.1 percent); Tennessee and Illinois (10.0 percent). (Two states are tied for tenth place.) However, the ten states with the greatest increase from 1980 to 1988 were largely in the west: New Mexico (71 percent); Wyoming (68 percent); Utah (57 percent); Idaho (45 percent); West Virginia (37 percent); Iowa (34 percent); Oklahoma (31 percent); Washington (30 percent); Ohio (28 percent); South Dakota (26 percent).

Teen Violent Death

The chances that a teenager would die a violent death, either by accident, suicide, or murder, increased during the 1980s. In 1984, 11,722 teens died by accident, suicide or murder; by 1988, that number had risen to 12,692. The teen violent death rate increased from 62.4 per 100,000 teenagers ages 15-19 in 1984 to 69.7 per 100,000 in 1988, a 12 percent increase. Thirty-three states and the District of Columbia had rates higher than the national average.

The KIDS COUNT data show that our nation's children are at greater risk today than at the beginning of the 1980s. Child poverty increased and persists. Births to unmarried teens rose. The chances that a teenager would die a violent death by accident, suicide or murder also increased over the decade. On other key measures of child well-being, our national progress has stalled.

There has been a particularly dramatic shift in the danger of violent death for black teenagers. In 1984, white teenagers were more likely than black teenagers to die an accidental or violent death. Between 1984 and 1988, the black teen violent death rate increased by 51 percent, while the white rate rose only 6 percent. By 1988, the black rate was 80.1 per 100,000 teens, far exceeding the white rate of 68.3 per 100,000.

At the same time, the chances that a young person would spend time incarcerated increased. In 1979, juveniles were incarcerated at a rate of 118 per 100,000 juveniles. By 1987, that rate had risen to 166 per 100,000 juveniles, a 41 percent increase.

Improvements Stalled

There has been little or no progress for several indicators of child well-being, including the portion of babies born low birth weight and percent of teens graduating from high school. Many children are without health insurance coverage.

Babies born weighing less than 5.5 pounds are much more vulnerable than heavier babies.

But the percent of low birth weight births increased slightly over the decade, from 6.8 percent in 1980 to 6.9 percent by 1988. Despite increased understanding of the importance of early care, little progress was made over the decade in getting pregnant women into early prenatal care. In both 1980 and 1988, almost one in four women received no early prenatal care.

While good health is essential to a child's development and achievement, many families do not have health insurance to cover the cost of health care. One in five American children has no public or private health insurance coverage. One in four black and one in three Hispanic children has no coverage.

Thirty-three states and the District of Columbia saw some improvement in their high school graduation rates. Overall, however, the nation has not made substantial improvements in the 1980s. In 1982, 69.7 percent of ninth graders graduated four years later. In 1988, 71.2 percent graduated, a 2 percent improvement over six years. This small increase did not keep pace with the increase in per pupil expenditures over the same period, which adjusted for inflation rose by 26 percent, from $3,373 in 1982 to $4,243 in 1988. Hispanic high school graduation rates improved by 1 percent between 1982 and 1988; black rates stayed the same. The white rate declined by 1 percent.

Encouraging News

During the 1980s the prospects for children improved in two areas: infant mortality and young child death rates. Infant mortality rates improved in every state between 1980 and 1988. However, a black baby is still twice as likely as a white baby to die during the first year of life. And, at the current rate of progress, the United States is not expected to meet the U.S. Public Health Service national infant mortality goal for the year 2000.

In 48 states and the District of Columbia, young child death rates for children ages 1-14 improved between 1980 and 1988. The rate of improvement for white children was twice that for black children. If current progress continues, the United States will meet the U.S. Public Health Service national goal for the year 2000 for young child deaths.

How are the Data Organized?

There are many ways to display data. This *Data Book* contains the following perspectives:

United States Profile. How the nation is doing overall using eight KIDS COUNT measures.

United States Minority Profile. National data broken down into white, black and Hispanic categories. Unfortunately, these data are not available for all three racial or ethnic categories for every measure.

State Profiles. Individual state data pages in alphabetical order by state detailing how each state is performing over the 1980s on eight KIDS COUNT measures of child well-being; the direction and magnitude of change over time; and a comparison of each state's performance relative to other states'.

National Goals and Performance for Children. How the nation is doing for children in comparison to national education and health goals for the year 2000.

Two-Year KIDS COUNT Profile. The 1991 *KIDS COUNT Data Book* is the second annual profile of child well-being. This chart compares the two years of KIDS COUNT data for the eight measures.

States in Rank Order by Indicator. A list of states in rank order by each of the eight indicators based on the most recent data available. This chart allows the reader to compare a state's performance with other states' on each individual measure.

State Facts. A compilation of data from the beginning and end of the 1980s showing the direction and magnitude of change over time, and a comparison of each state's current performance relative to other states' using four measures of resources that affect children's health and education, and family income.

What is KIDS COUNT?

KIDS COUNT is an initiative of The Center for the Study of Social Policy, a not-for-profit research and policy analysis organization based in Washington, DC. Support for KIDS COUNT comes from The Annie E. Casey Foundation, the largest philanthropy in the country devoted exclusively to disadvantaged children.

KIDS COUNT seeks to gain the attention of national and community leaders across the country through annual statistical profiles of child well-being in the hopes of building a common commitment to improving opportunities and outcomes for children.

At the national level, KIDS COUNT's primary effort is the annual production and dissemination of the *KIDS COUNT Data Book*. This 1991 *Data Book* is the second annual edition.

To provide a more detailed profile of the status of children at the state and local level, The Annie E. Casey Foundation has awarded eight KIDS COUNT state grants. With these awards, public and private non-profit organizations, state government and universities will assemble and analyze state and local data on children. These data will be used to publicize the needs of children, inform budget and program decisions, and monitor state and local performance for children.

Definitions

In alphabetical order

Benefits as Percent of Poverty (AFDC and Food Stamps) is the percentage of the previous year's U.S. poverty threshold covered by the combination of current year state AFDC and Food Stamp benefit levels for a one-parent family of four persons. The poverty threshold for a one-parent family of four persons was $12,675 in 1989. (In Alaska and Hawaii, the threshold was increased by 25 and 15 percents respectively to reflect the higher cost of living.)

Child Death Rate, Ages 1-14 (per 100,000 children) is the number of deaths from all causes of children between the ages of 1-14 years, per 100,000 children ages 1-14 years. Data are reported by place of residence.

Education Expenditures Per Pupil includes all expenditures allocable to per pupil costs divided by average daily attendance. These expenditures include current expenditures (adjusted to 1988 constant dollars) for regular school programs, interest on school debt, and capital outlays. Expenditures for summer school, community colleges and private schools have been included.

Infant Mortality Rate (per 1,000 live births) is the number of deaths of infants under one year of age, per 1,000 live births. The data are reported by place of residence. National Hispanic data were reported by 23 states and the District of Columbia in 1988.

Juvenile Incarceration Rate (per 100,000 juveniles) is the number of youths aged 10 through the age of the maximum original court jurisdiction in each state who are placed in Public Detention Centers and Public Training Schools, per 100,000 youths. The numbers are based on counts from a one-day facility census. They do not include placements in private facilities, even if those facilities are supported by public funds.

Per Capita Income is the annual total personal income of residents divided by the resident population as of July 1 of each year. Personal income is the pre-tax income received by persons from all sources less personal contributions for social insurance. It is reported in current dollars.

Percent Births with Early Prenatal Care is the percentage of births that are to women who started prenatal care in the first three months of their pregnancy. The data are reported by residence of the mother. The percentages do not include births to women who did not report the month in which prenatal care was started. In the 1990 *Data Book*, these births were included as late prenatal care. (To conform to U.S. Public Health Service national health goals, this indicator is stated in terms of women receiving early prenatal care. In the 1990 *Data Book* the indicator was defined as women not receiving early prenatal care.)

Percent Graduating High School is computed by dividing the number of public high school graduates by the public ninth grade enrollment four years earlier. Ninth grade enrollments include a prorated portion of secondary school students who are not classified by grade. Graduation rates are also corrected for interstate population migration. (To conform to national goals in education, this indicator is stated in terms of percent graduating from high school. In the 1990 *Data Book* the indicator was defined as the percent not graduating from high school.)

The Department of Education does not calculate graduation rates by race or ethnic origin. The national rates for white, black and Hispanic students are from a different data source and are defined as the number of persons ages 18 and 19 years who are high school graduates.

Percent Low Birth Weight Babies is the percentage of live births which are recorded as low birth weight. Low birth weight is defined as those babies that weigh under 2,500 grams (5.5 pounds) at birth. The data are reported by residence of the mother.

Percent of Children in Poverty is the percentage of related children under 18 years of age who live in families with incomes below the U.S. poverty threshold, as defined by the U.S. Bureau of the Census. The poverty threshold for a one-parent family of four persons was $12,675 in 1989. The data presented here represent a five year average, 1985-1989. For this indicator, people of black or white origins are non-Hispanic black or white.

Percent of Children Not Covered by Health Insurance is the percentage of related children under 18 years of age who are not covered by any kind of public or private health insurance, including Medicaid. The data presented here represent a five year average, 1986-1990. For this indicator, people of black or white origins are non-Hispanic black or white.

Percent Population Metropolitan is the percentage of the total population that live in the 263 metropolitan statistical areas and 20 consolidated metropolitan statistical areas as defined by the U.S. Office of Management and Budget and utilized by the U.S. Census Bureau.

Percent Population Minority is the percentage of the total population that is identified as black, Hispanic and other races and ethnic groups. The other category primarily includes Native and Asian Americans. The detailed procedures for the identification process are described in the source materials.

Percent Population Under 18 is the percentage of the total population as defined below which are under the age of 18 years.

Percent Teen Out-of-Wedlock Births is the percentage of live births which are to unmarried women under the age of 20 years. Data are reported by the residence of the mother. In the 1990 *Data Book*, all teenage births were considered.

Teen Violent Death Rate, Ages 15-19 (per 100,000 teens) is the number of deaths from homicide, suicide and accidents of teens between the ages of 15-19, per 100,000 teens ages 15-19. Data are reported by place of residence.

Total Population is the total resident population and includes Armed Forces stationed in the area.

United States Minority Profile

Racial and ethnic minorities are becoming a larger share of the population. By the year 2000, nearly one-third of all school-age children will be from minority populations.

A black child is almost three times as likely as a white child to live in poverty.

A black baby is more than twice as likely as a white or Hispanic baby to be born low birth weight.

A black baby is twice as likely as a white baby to die during the first year of life.

A black teenager is almost four times as likely as a white teenager to have a baby out-of-wedlock.

An Hispanic child is almost twice as likely as a white child to have no health insurance.

An Hispanic child is almost twice as likely as a white child to not graduate from high school in four years.

All kids count: African American, Asian American, Mexican American, Native American, and any other race or ethnicity. They all are part of the vitality of this country. They are all part of our common future.

The national data in the previous chart mask the disparities in the health, social, economic and educational well-being of white, black and Hispanic children. These differences have substantial implications for the future of these children, and the nation.

The overall number of children has not substantially increased over the 1980s. However, racial and ethnic minorities are becoming a larger share of the population. By the year 2000, nearly one-third of all school-age children will be from minority populations.

KIDS COUNT data show that black and Hispanic children are doing less well and are at greater risk than white children in many areas.

These opportunity and outcome gaps affect these children every day. They carry consequences for *their* children tomorrow, and for all of us as we build resilient families and communities.

National Goals and Performance for Children

National Education Goals for the Year 2000
Developed by the White House and Governors

1. By the year 2000, all children in America will start school ready to learn.

2. By the year 2000, the high school graduation rate will increase to at least 90 percent.

3. By the year 2000, American students will leave grades four, eight, and twelve having demonstrated competency over challenging subject matter including English, mathematics, science, history and geography, and every school in America will ensure that all students learn to use their minds well, so they may be prepared for responsible citizenship, further learning, and productive employment in our modern economy.

4. By the year 2000, American students will be first in the world in science and mathematics achievement.

5. By the year 2000, every adult American will be literate and possess the knowledge and skills to compete in a global economy and exercise the rights and responsibilities of citizenship.

6. By the year 2000, every school in America will be free of drugs and violence and offer a disciplined environment conducive to learning.

Kids and the future. The earlier sections have presented a wealth of detail about child well-being, both in terms of the latest available data and of the trends over the last decade. But the real point of KIDS COUNT is the future. Where should we be going—nationally and on a state-by-state basis? If a state has the lowest infant mortality rate in the nation, is that good enough?

In this section, we compare the KIDS COUNT national data with the recommendations of two ongoing national goal-setting efforts: the national education performance goals for the year 2000 approved in 1990 by President Bush and the nation's governors; and the health goals from the U.S. Department of Health and Human Services, Public Health Service, *Healthy People 2000: National Health Promotion and Disease Prevention Objectives*. We also indicate whether the nation is likely to achieve each goal given the current rate of progress.

For three of the four KIDS COUNT indicators for which there is a national goal for the year 2000, the nation will not meet that goal, if current trends continue. The nation is expected to reach the goal for young child deaths.

There are no national goals at present for four of the eight KIDS COUNT indicators. The absence of a national goal, however, in no way implies that equally strenuous efforts should not be undertaken in those areas to improve children's lives. We hope that over the next few years the country will adopt ambitious goals in these areas as well.

At the least, the existing goals give us something to aim for, as well as guideposts for assessing current performance and progress. At the best, they represent a common vision and commitment to improve children's lives.

	National goals	National data		Year 2000 performance
		MOST RECENT		
Indicators	By the year 2000	Year	Data	Will the goal be reached ?
Percent low birth weight babies	Reduce low birth weight to an incidence of no more than 5% of live births. Reduce low birth weight to an incidence of no more than 9% of black live births.	1988	6.9% 13.0%	No No
Infant mortality rate (per 1,000 live births)	Reduce the infant mortality rate to no more than 7 per 1,000 live births. Reduce the black infant mortality rate to no more than 11 per 1,000 live births.	1988	10.0 per 1,000 live births 17.6 per 1,000 live births	No No
Child death rate Ages 1-14 (per 100,000 children)	Reduce the death rate for children by 15% to no more than 28 per 100,000 children ages 1 - 14.	1988	33.2 per 100,000 children ages 1 - 14	Yes
Teen violent death rate Ages 15-19 (per 100,000 teens)	None*	1988	69.7 per 100,000 teens ages 15 - 19	?
Percent teen out-of-wedlock births	None	1988	8.2%	?
Juvenile incarceration rate (per 100,000 juveniles)	None	1987	166 per 100,000 juveniles	?
Percent of children in poverty	None	1985-89	20.1%	?
Percent graduating high school	Increase the high school graduation rate to at least 90%.	1988	71.2%	No

*The national goal is to reduce the death rate for adolescents and young people by 15 percent to no more than 85 per 100,000 people ages15 - 24. The KIDS COUNT indicator measures the teen violent death rate for teens ages 15 - 19. Therefore, the national goal could not be used in this context.

Two-Year KIDS COUNT Profile

The 1991 *KIDS COUNT Data Book* is the second annual profile of child well-being. This chart compares the two years of KIDS COUNT data. Where indicators were changed between the 1990 and 1991 data books, the 1991 indicators were used for both years in this two-year profile and the National Composite Rank for 1990 recalculated based on the more recent set of indicators. In each subsequent annual data book, KIDS COUNT will provide this cumulative portrait.

State Facts

This chart compiles data from the beginning and end of the 1980s, showing the direction and magnitude of change over time, and a comparison of each state's performance relative to other states' using four measures of resources that affect children's health and education, and family income. The most recent state data for these measures also appear on the individual state pages.

Methodology and Notes

National Rankings

All states and the District of Columbia were arranged in sequential order from best (1) to worst (51) and assigned the respective rank using the latest available data for each indicator. Whenever there was a tie of two or more states, they were assigned the lower rank (e.g., if three states tied at ranking positions 20, 21, and 22 they were all assigned a rank of 20 and the next state was ranked 23).

Composite Rankings

A state's national ranking for each of the eight child well-being indicators was summed to create a National Composite Rank. Whenever there was a tie of two or more states, they were all assigned the same lower number. All indicators were treated equally; no attempt was made to judge the relative importance of each indicator.

Percent Change Analysis

The calculation of the percent change over time was computed by comparing the most current data for each indicator with the historical data available closest to 1980. The percent change number is rounded to the closest whole number. The time periods vary by indicator due to the unavailability of data for a uniform time period. The different time periods used for the different indicators are:

Indicators of Child Well-Being

1979-1985-89	Percent of children in poverty
1979-1987	Juvenile incarceration rate
1980-1988	Percent low birth weight babies
1980-1988	Infant mortality rate
1980-1988	Child death rate
1980-1988	Percent teen out-of-wedlock births
1982-1988	Percent graduating high school
1984-1988	Teen violent death rate

Indicators of Resources for Children

1980-1988	Percent births with early prenatal care
1982-1988	Education expenditures per pupil
1982-1990	Benefits as percent of poverty
No trend data.	Percent of children not covered by health insurance

A positive percentage represents improvement and a negative percentage represents a deteriorating status. For example, a 20 percent change in Infant Mortality indicates that infant mortality has been reduced, a -25 percent change in Percent of Children in Poverty indicates an increase in child poverty.

Projections for Year 2000

Four of the indicators have goals which have been set for the year 2000. For these indicators, projections were made in order to ascertain if the goals are likely to be reached. The projections for the year 2000 were based on trend data and on the assumption that the same annual percent change observed from the base year to latest year will continue until the year 2000.

Infant Mortality Rate (per 1,000 live births). NCHS, *Monthly Vital Statistics Report*. **1988 data:** "Advance Report on Final Mortality Statistics, 1988," Vol. 39, No. 7, Table 17 and pg. 10, November 28, 1990. **1987 data:** "Advance Report on Final Mortality Statistics, 1987," Vol. 38, No. 5, Supplement, Table 17 and pg. 9, September, 1989. **1980 data:** "Advance Report on Final Mortality Statistics, 1980," Vol. 32, No. 4, Supplement, August 11, 1983, Table 12.

Juvenile Incarceration Rate (per 100,000 juveniles). Data for all years were provided by the University of Michigan Center for the Study of Youth Policy.

Percent Graduating High School (adjusted for migration). U.S. Department of Education, "State Education Performance Chart: Student Performance, Resource Inputs, State Reforms, and Population Characteristics, 1982 and 1989" and "State Education Performance Chart: Student Performance, Resource Inputs, State Reforms, and Population Characteristics, 1982 and 1988." **National white, black and Hispanic data:** U.S. Bureau of the Census, *Current Population Reports*, "School Enrollment—Social and Economic Characteristics of Students: October 1988 and 1987," Series P-20, No. 445, Tables 1 and 20 and "School Enrollment—Social and Economic Characteristics of Students: October 1982," Series P-20, No. 408, Table 1.

Percent Low Birth Weight Babies. NCHS, *Monthly Vital Statistics Report*. **1988 data:** "Advance Report of Final Natality Statistics, 1988," Vol. 39, No. 4, Supplement, August 15, 1990, Table 16, 27. **1987 data:** "Advance Report of Final Natality Statistics, 1987," Vol. 38, No. 3, Supplement, June 29, 1989, Table 16, 27. **1980 data:** "Advance Report of Final Natality Statistics, 1980," Vol. 31, No. 8, Supplement, November 30, 1982, Table 14 and "Births of Hispanic Parentage, 1980," Vol. 32, No. 6, Supplement, September 25, 1985, Table 14.

Percent of Children in Poverty, 1985-89 and 1984-1988 data: Population Reference Bureau analysis of the U.S. Bureau of the Census, March Supplement Current Population Survey tapes, 1985 through 1990. **1979 data:** U.S. Bureau of the Census, *1980 Census of Population and Housing*, Series PHC 80-3, "Summary Characteristics for Governmental Units and Standard Metropolitan Areas."

Percent Teen Out-of-Wedlock Births. NCHS. **1988/1987 data:** *Vital Statistics of the United States*, Vol. 1, Natality, Section 1, Tables 1-77, 1-115 and *Monthly Vital Statistics Report*, "Advance Report of Final Natality Statistics, 1988," Vol. 39, No. 4, Supplement, August 15, 1990, Tables 6, 18, 26; "Advance Report of Final Natality Statistics, 1987," Vol. 38, No. 3, Supplement, June 29, 1989, Tables 6, 18, 26. **1980 data:** NCHS, *Vital Statistics of the United States*, 1980, Vol. 1, Natality Section 1, Table 1-72 and *Monthly Vital Statistics Report*, "Advance Report of Final Natality Statistics, 1980," Vol. 31, No. 8, Supplement, November 30, 1982, Table 15 and "Births of Hispanic Parentage, 1980," Vol. 32, No. 6, Supplement, September 25, 1985, Table 11.

Teen Violent Death Rate, Ages 15-19 (per 100,000 teens). Death Statistics: Special tabulation by NCHS, Mortality Division, Table III "Deaths from 282 Selected Causes, By 5 Year Age Groups, Race, and Sex: U.S. & Each State" for the years 1988, 1987 and 1984. **Population Statistics:** U.S. Bureau of the Census, *Current Population Reports*, "Projections of the Population of States, by Age, Sex, and Race: 1988 to 2010," Series P-25, No. 1017, Table 5, "United States Population Estimates, by Age, Sex, Race, and Hispanic Origin 1980 to 1988," Series P-25, No. 1045, Table 2 and "State Population and Household Estimates: July 1, 1989," Series P-25, No. 1058, Table 8.

National Goals
(in alphabetical order)

Education Goals. National Governors' Association, *Educating America: State Strategies for Achieving the National Education Goals, Report of the Task Force on Education*, 1990.

Health and Child Death Goals. U.S. Department of Health and Human Services, Public Health Service, *Healthy People 2000: National Health Promotion and Disease Prevention Objectives*, September, 1990.

The Center for the Study of Social Policy

KIDS COUNT is an initiative of The Center for the Study of Social Policy, a not-for-profit research and policy analysis organization based in Washington, DC. Founded ten years ago, the Center's mission is to promote change through the analysis of existing and proposed social policies and programs in the areas of income support, human services, disabilities and health care.

The Annie E. Casey Foundation

Support for KIDS COUNT comes from The Annie E. Casey Foundation. Established by the founders of United Parcel Service, The Annie E. Casey Foundation is the nation's largest philanthropy devoted exclusively to disadvantaged children. Its principal mission is to improve the family and community environments that shape young people's health, development, education, opportunities and aspirations. The Foundation is located in Greenwich, Connecticut.
